Bachelor and Master-Theses

Quantum Technology

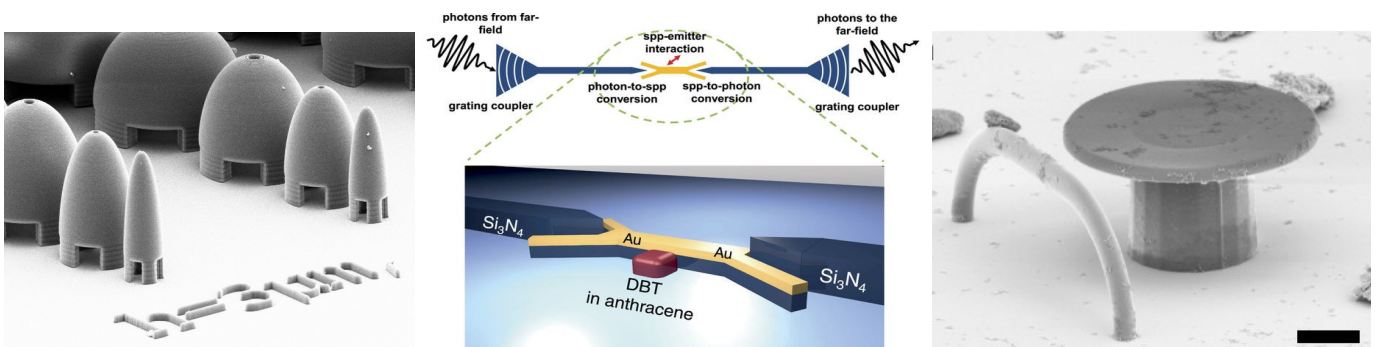

The Quantum Technology group – a joint research group of Leibniz University Hannover and PTB Braunschweig – is searching for interested Bachelor and Master students in Quantum Technologies.

In our new labs (currently being set up in the Institute of Solid State Physics at LUH) we are going to research on optical implementations of quantum technologies such as sources of single photons, quantum networks, quantum metrology and others.

We invite motivated students to join our research team and learn about the rapidly developing field of quantum technologies.

If you are interested, please contact Prof. Andreas W. Schell via phone, email, or come to the office 032 for a chat. We furthermore offer the possibility for internships.
